SUMMARY

Information Science Engineering student focused on privacy-preserving systems, applied cryptography, and decentralized identity architectures. Experience building ML pipelines and blockchain-backed verification systems using FastAPI, React, and Ethereum.

EXPERIENCE

Member | *Coding Club, RV College of Engineering* October 2025–Present

- Presented AI Agent Wallet architecture integrating LLM agents with smart contracts.
- Built a voice-enabled shell terminal in Python using speech recognition APIs.
- Competed in CTF security challenges and hackathons hosted by the club.

PROJECTS

Decentralized Identity Detection Using AI And Blockchain October 2025–Present
RV College of Engineering

https://github.com/Abhiram-K-User/De-centralised_Identity

- Designed a decentralized biometric DID system removing local databases using IPFS (Pinata) and Ethereum Sepolia smart contracts for DID→CID mapping.
- Built a Python FastAPI ML pipeline reducing ~4MB biometrics to ~5KB encrypted metadata + a 32-byte hash using InsightFace, SpeechBrain, and EasyOCR.
- Implemented secure processing using AES-256-CBC encryption with per-session IVs and in-memory decrypt/compare workflows.
- Developed a React 18 + Vite frontend supporting registration, verification, and identity history flows.

Password Hygiene Tracker January 2026–Present
RV College of Engineering

https://github.com/Abhiram-K-User/Sentinal-Password_Manager

- Developed a zero-knowledge password manager using client-side AES-256 encryption (PBKDF2) with React, TypeScript, CryptoJS, and Supabase.
- Implemented password strength and breach detection using zxcvbn and Have I Been Pwned API producing a 0–100 hygiene score.
- Built vault features including credential search, copy, and CSV/JSON export using Vite, Tailwind CSS, and shadcn/ui.

EDUCATION

B.E. Information Science Engineering Expected 2028
RV College of Engineering, Bangalore
CGPA: 9.31

Class XII (PUC) 2024
Base PU College
Percentage: 96.2%

Class X 2022
BGS National Public School
Percentage: 96.8%

CERTIFICATIONS

Introduction to Cryptography and Network Security NPTEL 2025

- Studied classical and modern cryptographic techniques including symmetric and asymmetric algorithms.
- Applied cryptographic principles to blockchain systems and consensus mechanisms.

Introduction to Large Language Models NPTEL 2025

- Studied transformer architectures including GPT, BERT, and T5 models.
- Explored scaling laws, fine-tuning approaches, and prompt engineering techniques.

SKILLS

- **Programming:** Python, TypeScript, JavaScript, C++, C, Solidity, SQL
- **Frameworks:** FastAPI, React 18, Vite, Tailwind CSS, shadcn/ui
- **Tools:** Git, Supabase, PostgreSQL, IPFS, Alchemy
- **Security/ML:** AES-256, PBKDF2, CryptoJS, zxcvbn, InsightFace, SpeechBrain, OpenCV, EasyOCR
- **Core CS:** Data Structures and Algorithms, Operating Systems, Blockchain Architecture
- **Languages:** English, Kannada
